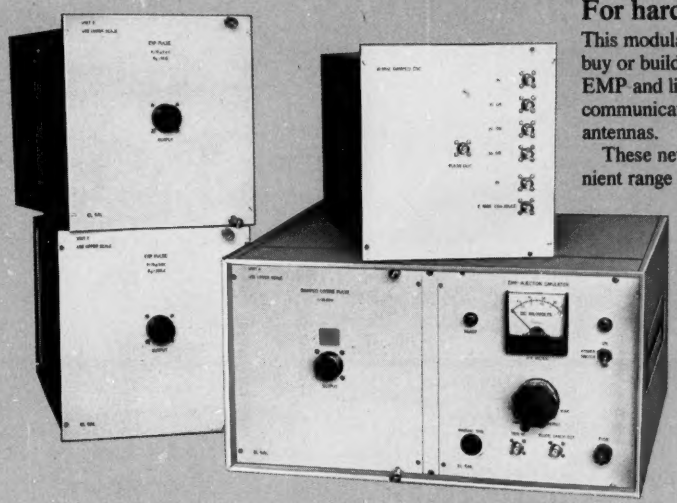
Now there are low-cost EMP simulators! Both damped-sine and exponential waveforms.



For hardening electronic subsystems.

This modular benchtop system eliminates the need to buy or build a huge million-dollar simulator to generate EMP and lightning effects on small to medium-size communications and data-processing gear, cables, and antennas.

These new Elgal simulators are offered in a convenient range of plug-in modules for direct and indirect cable-injection to 20kV. Both exponential-decay and damped-oscillation waveforms are available. Other Elgal equipment delivers up to 2.5MV for high-altitude-burst EMP simulation.

Built in Israel by Elgal Electronics, a major supplier to the Israeli defense effort. Call or write Amplifier Research, exclusive USA and Canada distributor, for further information.
